

## SNCF Réseau closes CyFENCE product tests with satisfaction

**SNCF's request :** In order to be integrated into a logic of digital continuity, the industrial world must rely on more and more transversal services used in IT (DNS, AD, NTP, PKI, etc.). The aim is to be able to develop these services in a secure industrial logic.

**Description :** Cybelius delivered at the beginning of October to **SNCF Réseau** a **CyFENCE** product which has been evaluated by the **Cyber Security SNCF Réseau** teams. This evaluation focused on the robustness, the functions, and the adequacy to the security needs of the project.

This evaluation ended positively and will lead **SNCF Réseau** to start a collaboration with **Cybelius** for the adaptation and supply of several systems.

**Director's testimony:** "Cybelius has a major asset to be fluent in both languages, Cyber Security and Industrial Engineering".

**About Cybelius :** Founded by experts in industrial IT and cybersecurity, Cybelius ensures the security of industrial installations and infrastructures. From the evaluation, to the security and real-time monitoring of industrial systems, Cybelius solutions cover the entire process of cyber security.

### About CyFENCE :

**CyFENCE** is an integral protection that carries all the security services protecting an industrial system, constituting a DMZ. It's made up of equipment and software integrated and configured by Cybelius.

In a nutshell, **CyFENCE** is :

- Effective against attackers
- Transparent for users
- Modular for operators

Compliant with the ANSSI-PA-044 guide, CyFENCE is the reference protection to ensure defence in depth between IT and OT.
